SAVE ADDICTS

Ghalia Madhram Almutairi

Student ID: 211857

Supervisor: Dr. Loai shalaby

TM471 – Final Year Project | Arab Open University – Kuwait

Project Aims & Objectives

MAIN GOAL Provide a private, secure mobile platform connecting addiction sufferers to qualified professionals while preserving complete anonymity.

Anonymous Registration

Pseudonym-based sign-up with Firebase Auth; no identity documents required.

Substance Filtering

Content and advice filtered by declared substance type (alcohol, opioids, cannabis…).

Secure Messaging

Encrypted in-app chat between patients and licensed psychiatrists.

Appointment Booking

Calendar-based scheduling for in-person physician consultations.

Recovery Dashboard

Clinician-updated Optimism Graph visualised as a personal progress timeline.

Educational Library

Culturally aware content organised by substance, age group, and perspective.

Problem Definition & Suggested Solution

THE PROBLEM

- 275 million people affected by drug use globally (WHO, 2021)
- Severe stigma in Kuwait & GCC blocks help-seeking
- Existing apps require real-name registration
- No substance-specific content or guidance available
- No integrated platform combining doctor access + tracking

THE SOLUTION

1. Pseudonym-only registration – no identity documents
2. Substance-specific content filter on login
3. Encrypted messaging with psychiatrists & physicians
4. In-app appointment booking with real-time Firebase sync
5. Clinician-updated Optimism Graph for recovery tracking

Progress & Achievements

Phase 1 ✓ Complete

Requirements

FR & NFR defined
10 functional specs
User story mapping

Phase 2 ✓ Complete

Literature Review

3 apps analysed
Advantages &
disadvantages listed

Phase 3 ✓ Complete

System Design

Software & Hardware Requirements

Software Requirements

Component	Specification
Development IDE	Android Studio (latest stable)
Language	Java (JDK 17)
Database	Firebase Realtime Database
Authentication	Firebase Authentication

Hardware Requirements

Component	Dev Machine	Target Device
Processor	Intel Core i5+	ARM Cortex-A53+
RAM	8 GB min.	3 GB min.
Storage	256 GB SSD	4 GB free
OS	Windows 10/11 (64-bit)	Android 9.0+

Functional Requirements

FR1 — *Patient*
Register anonymously
Pseudonym + email; no identity documents.

FR2 — *Patient*
Select substance type
Filter all content by declared substance.

FR3 — *Patient*
Message psychiatrist
Encrypted in-app text communication.

FR4 — *Patient*
Book appointment
Calendar-based scheduling with physician.

FR5 — *Patient*
Recovery dashboard
Clinician-updated Optimism Graph display.

FR6 — *Patient*
Access library
Filtered educational videos and books.

FR7 — *Psychiatrist*
Accept & conduct sessions
Manage queue and run consultations.

FR8 — *Physician*
Update recovery file
Edit health status and Optimism Graph.

FR9 — *Physician*
Manage appointments
Confirm, view, and cancel bookings.

FR10 — *Admin*
Manage library content
Upload and categorise educational material.
